

Osprey:API

Integrated Risk Intelligence for Brokers and Insurers

Osprey's API provides risk intelligence directly into your workflow, enabling insurers and brokers to assess location and country risk quickly, consistently and at scale.

By integrating directly into risk and portfolio management workflows, firms gain direct access to current risk assessments that support better risk selection, exposure analysis and pricing decisions. The result is a clearer understanding of where insured assets operate and the risks they face.

Why It Matters

Insurance decisions are only as good as the information behind them. Without current and reliable intelligence, firms risk making decisions based on incomplete, outdated or inconsistent assessments of the operating environment. Osprey helps businesses move beyond manual research and fragmented intelligence sources by providing automated access to trusted risk data.

Key Benefits

Improve Risk Selection

Evaluate airport and country risks consistently across your portfolio using a standardised methodology.

Enhance Commercial Decisions

Access up-to-date intelligence to support pricing, exposure analysis and to inform decisions on scope of cover and any applicable special terms.

Automate Existing Workflows

Integrate risk scores directly into corporate platforms and proprietary systems, reducing manual effort and increasing efficiency.

Expand Business with Confidence

Identify opportunities that may previously have been declined due to limited visibility of the risks in the operating environment and out-of-date risk intelligence.

Support Portfolio Management

Monitor changes in risk exposure across insured assets through continuous access to up-to-date, dynamic intelligence.

Available Data Products

Airport Risk Scores

Global coverage across airports.

- **Standard:** Airport identifiers, geographic data, Total Risk Score and Risk Level classification.
- **Enhanced:** Risk Theme breakdowns and greater transparency into score drivers.
- **Premium:** Proximity-based threat indicators, international transport designations and military presence indicators

Country Risk Scores

Coverage across all global territories.

- **Standard:** Country risk score, Risk Level classification and geographic context.
- **Enhanced:** Risk Theme breakdowns and a detailed understanding of national risk drivers.

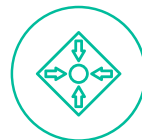

Typical Use Cases

Asset hull and liability underwriting support

Reinsurance risk assessment

Exposure accumulation analysis

Portfolio monitoring

Risk pricing support

War risk evaluation

Broker advisory services

Delivering Better Risk Decisions

Osprey enables firms to understand exactly what risks insured assets face, both before policies are bound and throughout their insurance lifecycle.

Trusted intelligence. Delivered directly into your workflow.
